Moldovan PM has discussions with World Bank's representatives

Opportunities to use new technologies, including artificial intelligence, to increase productivity in various sectors, such as healthcare and agriculture, have been discussed by Prime Minister Vasile Tofan and World Bank’s Regional Director for Digital Transformation Michel Kerf. The sides also addressed potential financing for projects focused on the digitalization and strengthening of Moldova’s resilience.

Prime Minister Vasile Tofan expressed Moldova’s interest in harnessing the latest artificial intelligence technologies and invited development partners to submit concrete proposals on the sectors where their application might help streamline processes and reduce the time required to carry out certain activities.

At the same time, the PM invited interested partners to test innovative ideas and services in Moldova, with a view to subsequently expanding them to other countries.

For his part, Michel Kerf expressed openness to exploring the possibility of supporting projects in the field of cyber resilience, including the identification of vulnerabilities and the strengthening of protection capacities against digital risks.
