

Moldovan PM visits kindergarten in commune of Chisinau municipality

A number of 140 children from the Truseni commune attend a fully equipped kindergarten prepared for educational activities. Prime Minister Alexandru Munteanu visited the new building of Kindergarten No. 1, commissioned in 2025, after 13 years in which the construction works had been postponed.

Thanks to the perseverance of the commune’s mayor, all necessary procedures were completed and today the space is fully equipped, including with educational toys. The kindergarten’s roof has also undergone a full capital reconstruction.

“In Truseni, we can clearly see that, when local government is active, the results are visible directly in people’s lives—first and foremost in the lives of children,” noted the prime minister.

In parallel, the settlement is being developed through other projects as well. Preschool institutions are being made more energy-efficient and nursery groups have been renovated and equipped through the Express European Village programme.

Additionally, the locality is connected to the water supply system, the access road to Truseni—which had not undergone major repairs since 1970—is under construction and through the Europe is Close programme, streets that never had asphalt have been modernized.
