Progress in solving the technical issues on registration of vehicles with neutral plates has been reviewed at the meeting of experts on road transportation

19.04.2021, Chisinau – A meeting of the experts on development of road transportation and infrastructure was convened for the 4th time this year to analyze the achievements on solving the technical problems of the Vehicle Registration Points from Tiraspol and Ribnita, but also to point out the next steps that can be taken to optimize processes.

The experts mentioned that the documentation service of car trailers with neutral plates, launched on 1 April, is fully operational and ensured according to the mechanism established by the Protocol Decision of 24 April 2018 and the Additional Protocol of 30 September 2020.

The sides also spoke about the requests to obtain neutral registration certificates for motor vehicles, the ownership of which was passed to another person by a succession procedure. The need to adjust the algorithm for providing these services and the adaptation of the existing technological schemes was also pointed out.

The re-equipment of vehicles was also discussed, specifically of those with gas supply systems, being mentioned that such changes must be carried out according to the requirements established by the legislation in force and that the relevant documents must be obtained at the authorized technical inspection stations.

The experts from Chisinau reiterated their availability to provide services to applicants based both on electronic appointments and on regular basis (live line) in order to

significantly increase the services provision capacity at the registration points in the Transnistrian region. They were puzzled about the reduction by the Transnistrian side of the number of daily scheduled persons in the Tiraspol subdivision as of April 1, and urged the exclusion of such limitations.
