The number of vehicles with Transnistrian registration numbers that cross the Moldovan-Ukrainian state border on the central (Transnistrian) segment has decreased

In order to facilitate the access of the means of transport from the Transnistrian region to the international road traffic, two Vehicles Registration Points are providing registration services with neutral plates in Tiraspol and Ribnita.

According to the data from the Transports State Register, during 01.09.2018 - 22.04.2021, there were registered 4881 vehicles with neutral plates at the above-mentioned subdivisions, out of which 3618 vehicles were registered in Tiraspol and 1263 vehicles – in Ribnita.

Also, according to the data from the Drivers State Register, during 01.10.2018 - 17.04.2021, of the total number of "driving licenses" issued in the region, 11487 licenses were changed to the national driving licenses of the Republic of Moldova.

Monitoring of the crossings across the state border revealed that during March this year the number of the Moldovan-Ukrainian state border crossings on the central (Transnistrian) segment by vehicles with registration numbers of the region decreased. According to the data provided by the Border Police of the Republic of Moldova, there were 90 crossings – a much lower number than for the similar month of the previous years.

We would like to remind that starting with 1 September 2021, only cars with neutral license plates will have access to the international road traffic, alongside the vehicles

registered according to the general provisions of the legislation of the Republic of Moldova.
