

The number of the state border crossings by vehicles with neutral registration number plates is increasing

According to the data provided by the Border Police of the Republic of Moldova since the beginning of May, there was a relatively low number of crossings by vehicles with "Transnistrian" registration plates, compared to those with the neutral registration plates.

In the current month there was an essential increase of cars crossing the state border with neutral license plates – 103 crossings, compared to 78 crossings of vehicles with "Transnistrian" numbers.

In order to have access to the international road traffic, car owners from the Transnistrian region should obtain neutral or national license plates, by submitting the appropriate documents.

Documentation services with neutral plates are provided in Tiraspol and Ribnita, where two Vehicles Registration Points are currently operating.

According to the data from the State Register of Transports, during 01-20.05.202, there were 109 vehicles registered with neutral plates in the subdivisions from Tiraspol and Ribnita. During 01.09.2018 - 20.05.2021 their total number reached 5057 vehicles.

There was also an increase of the number of applications for replacing the driving licenses. According to the data from the State Register of Drivers, for the period

01.10.2018 - 15.05.2021, there were changed 11687 licenses.

Currently, according to the data provided by the relevant national authorities, the rate of replacing the "Transnistrian licenses" with the Moldovan driving licenses is more dynamic than the registration of vehicles from the region with neutral plates.

We would like to remind that starting with 1 September 2021, only cars with neutral license plates will have access to the international road traffic, alongside the vehicles registered according to the general provisions of the legislation of the Republic of Moldova.
