Online meeting of the healthcare working group experts

Today, June 8, the sectoral experts on healthcare met in a new online meeting. The discussions focused on issues related to the import procedure and authorization of medicines and medical substances in the Republic of Moldova, as well as to the overlaps and conditions for adjusting the nomenclature of the Transnistrian region to the legislation in force of the Republic of Moldova.

The representatives of the relevant authorities from Chisinau made some clarifications on the authorization procedure of the pharmaceutical products imported by the economic operators from the Transnistrian region and explained the conditions on issuing the import authorization.

The dialogue also included aspects related to the National Immunization Plan against COVID-19 and to the national vaccination campaign for the population on both banks of Nistru.

Chisinau stressed the importance of taking over, distributing and using the doses of vaccine meant for the inhabitants of the Transnistrian region as a donation received by the Republic of Moldova from the international partners.

The experts agreed to maintain a continuous dialogue on public health issues in order to strengthen efforts to overcome the pandemic at the national level, as well as to reduce the impediments that would disrupt the activity of the economic agents in accordance with the existing regulations.
